WHAT IS #DRYMESTER?

#DRYMESTER is a health awareness campaign commissioned by the Greater Manchester Health and Social Care Partnership which seeks to highlight the risks of drinking alcohol during pregnancy, and Fetal Alcohol Spectrum Disorder (FASD).

The aim of #DRYMESTER is to dispel the many mixed messages and advice given to parents-to-be regarding drinking alcohol and encourage pregnant women, or women planning a pregnancy to go alcohol free.

We're asking you to help us spread the word to the employees and customers of your business — there's no safe time and no safe amount of alcohol to drink during pregnancy.

KNOW THE EXPERT ADVICE

If you're pregnant or planning to become pregnant, the safest approach is **not to drink alcohol at all** to keep risks to your baby to a minimum.

WHAT IS FASD?

FASD stands for Fetal Alcohol Spectrum Disorder and is an umbrella term used to describe the range of lifelong disabilities that can occur as a result of drinking alcohol during pregnancy.

FASD includes physical, mental, behavioural and learning impairments. Symptoms include facial abnormalities, brain damage, heart defects, limb and kidney damage as well as cognitive disabilities such as learning difficulties, poor impulse control and social and mental health issues. FASD is commonly misdiagnosed as other disorders such as ADHD which have some similar symptoms.

Recent prevalence research shows that FASD may affect

UP TO 3.6%

of children in Greater Manchester

That's the equivalent of 1,238 children born each year

SYMPTOMS INCLUDE

Small head circumference

Facial distinctions – low set ears

Below average height and weight

Limb damage

Bone formation defects

Brain damage

Heart defects

Kidney damage

Smooth ridge between the upper lip and nose

Small and wide-set eyes

Thin upper lip

Learning difficulties

Poor impulse control

Problems with time, money or maths

Problems in social understanding

Problems in memory, attention or judgement

Problems receiving and processing language

Less than 10% of those with FASD will have these recognisable facial features

WHAT CAN YOU DO TO HELP?

INTRODUCE #DRYMESTER TO YOUR WORKFORCE

To protect new and expectant mothers, please consider #DRYMESTER and healthy pregnancy conversations when carrying out a pregnancy risk assessment and ensure the expectant mother is aware of the Chief Medical Officers guidance.

We've created plenty of resources to help you to introduce #DRYMESTER, not only to expectant mothers but to their families and friends, so you'll be armed with all of the information you need, including things like intranet graphics, a conversation guide,

explainer videos and a training session. If you need a specific size or format for any of the resources, please reach out to info@drymester.org.uk.

Whether it's having one conversation about #DRYMESTER with a customer, posting a couple of graphics on social media, or adding #DRYMESTER to your health and wellbeing agenda and using all of the resources we've created, it helps us get one step closer to reducing the likelihood of children being born with FASD.

Awareness is the greatest agent for change.

SUPPORT SERVICES

There may be some individuals who ask for advice either about FASD, if they have concerns and recognise the symptoms, or about going alcohol free during pregnancy.

If this happens, there are plenty of support services you can suggest to them. You can also advise for them to see their GP or midwife if they have concerns.
